DESIGNED FOR INSTALLERS

A COMPLETE TREATMENT SYSTEM IN A SINGLE EXCAVATION

Consolidated Treatment Systems, Inc. is proud to present the M6-EV wastewater treatment system. Built upon our Nayadic technology the M6-EV is the evolution of residential onsite treatment.

Designed with the Installer in mind the M6-EV provides pre-treatment, advanced treatment, and a pump tank in a single, lightweight design. This 3 in 1 Tank design requires less excavation than traditional systems which reduces time onsite when digging in rocky soils or areas with high ground water. The compact design is perfect for tight lots and the fiberglass construction eliminates the need for expensive cranes or boom trucks to set the unit.

Every system comes complete with tank, sanitary tees, audible / visual alarm and controls capable of controlling either dose or sprinkler applications, junction box for electrical connections, external compressor and housing, effluent filter, 4 lifting eyes, and a high-head discharge pump. Units also include a two year manufacturer's warranty.
